SKILLS

AI & LLM

- Gemini API
- Cursor (daily)
- GitHub Copilot

CI/CD & Automation

- Jenkins
- GitHub Actions
- TeamCity
- AWS CodePipeline

Languages

- Python
- Bash
- Node.js
- TypeScript

Cloud & Infra

- AWS (Certified)
- GCP
- Terraform
- Azure

Containers

- Docker
- Kubernetes
- Helm
- OpenShift

APIs & Tools

- REST APIs
- MS Teams Webhooks
- Kubernetes APIs

Observability

- Prometheus
- Grafana

Testing

- PyTest
- API/Batch Perf Testing
- Testing Strategies
- Manual Testing

ABOUT ME

Automation & AI Engineer with hands-on experience building LLM-powered agents, end-to-end CI/CD pipelines, and API-driven automation. At Regnology, designed and prototyped ATIE — an agentic test triage system using the Gemini API — built Jenkins pipelines cutting manual effort by 90%+, and automated JIRA-based release reporting. I build the agents, own the pipelines, and ship outcomes end to end.

EXPERIENCE

Regnology | Automation Engineer (SDET)

2025 – Present

ATIE – AI-Driven Test Triage Agent

- Developed, ATIE (Abacus Test Intelligence Engine) along with the team, a semi-autonomous agentic system using the Cursor to analyze Kubernetes test logs, infer root causes, and auto-generate defect titles and descriptions, reducing triage effort by ~60–80%.

Automation Pipelines & Integrations

- Built Jenkins pipeline to autopilot test execution, and reduced 4–5 hours of manual release work to a 3-minute job with auto-generated HTML reports.
- Wrote Python scripts for XML/Excel data consistency checks on a large-scale migration project, cutting validation effort by ~70%; packaged as a reusable Jenkins job.
- Built Jenkins + JIRA API integration: fetches defects by filter, segregates by priority & assignee, and generates a formatted Excel report for management release reviews.
- Automated Microsoft Teams notifications via Python webhooks, real-time alerts on Jenkins job start, completion, and failure, eliminating manual end-of-day updates.

Wolters Kluwer | Associate Quality Assurance Engineer

2023 – 2025

- Built and maintained CI/CD pipelines using TeamCity for automated builds and deployments across multiple microservices.
- Wrote Bash automation scripts for environment provisioning and config management, significantly cutting environment setup time.
- Containerized dev and staging environments using Docker, eliminating inconsistency issues and standardizing setup across the team.
- Authored deployment runbooks, troubleshooting guides, and process documentation for the production support team.

AnsrCoach | Backend Engineer Intern

2022 – 2023

- Built the full server-side of a MERN stack app from scratch: REST APIs, middleware, authentication, MongoDB schemas, and third-party integrations (payments, email).

PROJECTS

Multi-Tool CI/CD Pipeline with Monitoring

Jenkins · Docker · Kubernetes · Helm · Artifactory · Prometheus · Grafana · Bash

- Architected end-to-end CI/CD pipeline for a Node.js microservices app with multi-stage Jenkins builds, automated testing, Docker image scanning, artifact versioning in JFrog, and Prometheus/Grafana observability.

CERTIFICATIONS

- AWS Certified Developer
- AWS Cloud Practitioner
- GitHub Actions (GH-200)
- DevOps Professional
- Docker Foundations
- GitHub Professional

EDUCATION

B.Tech

[2020 – 2024]

Vishwakarma Institute of Technology, Pune
